

## Description for WhereToGo

WhereToGo is a website for booking air ticket. You can search for One-Way, Round-Trip, Multi-City, Domestic and International flights. But to make a reservation, you have to login or register first as a customer. Thanks for your understanding.

We use JSP and Html to build the front user interface and use JDBC and Java Servlet to connect and interact with our database. We build our database by mysql, for more information you can see relational model and SQL code.
